EXPERIMENT 3

Aim: To implement the game, Tic-Tac-Toe using the A* search strategy.

Code:

```
import random
import time

n = [0, 1, 2, 3, 4, 5, 6, 7, 8]
board = ['0', '0', '0', '0', '0', '0', '0', '0', '0']
rows = [['0', '0', '0'], ['0', '0', '0'], ['0', '0', '0']]
columns = [['0', '0', '0'], ['0', '0', '0'], ['0', '0', '0']]
diagonals = [['0', '0', '0'], ['0', '0', '0']]

def player_win(current):
    over = False
    for i in range(3):
        if rows[i].count(current) == 3:
            over = True
            break

    if columns[i].count(current) == 3:
        over = True
        break

    if i < 2:
        if diagonals[i].count(current) == 3:
            over = True
            break
```

```
if over:
    return True
else:
    return False
```

```
def check():
    x = []
    o = []
    for i in range(3):
        if rows[i].count('O') == 1:
            index = rows[i].index('O')
            index = 3 * i + index
            if rows[i].count('X') == 2:
